

ONE SHOT:-

PROMPT GIVEN :-

classify the following sentence as postive or negative."the movie was excellent."

OUTPUT:-

Positive — “The movie was excellent.” expresses a favorable opinion.

ZERO-SHOT:-

PROMPT GIVEN:-

Classify the following sentences as Positive or Negative.

Example:

Sentence: "I love this product."

Answer: Positive

Now classify:

Sentence: "The service was very slow."

OUTPUT:-

Answer: **Negative**

FEW-SHOT:-

PROMPT GIVEN:-

Classify the following sentences as Positive or Negative.

Example 1:

Sentence: "I love this product."

Answer: Positive

Example 2:

Sentence: "The service was very slow."

Answer: Negative

Example 3:

Sentence: "The food was delicious."

Answer: Positive

Now classify:

Sentence: "The product quality is poor."

OUTPUT:-

Answer: Negative

COMPARING ALL THOSE:-

PROMPT GIVEN:-

Compare Zero-shot, One-shot, and Few-shot prompting based on the following experiment results.

Zero-shot:

No example was given.

Input: "The movie was excellent."

Output: Positive

One-shot:

One example was given.

Example: "I love this product." → Positive

Input: "The service was very slow."

Output: Negative

Few-shot:

Three examples were given.

Example 1: "I love this product." → Positive

Example 2: "The service was very slow." → Negative

Example 3: "The food was delicious." → Positive

Input: "The product quality is poor."

Output: Negative

Create a simple comparison table with these columns:

Prompt Type | Number of Examples | Input | Output

Then give a short conclusion about the difference between Zero-shot, One-shot, and Few-shot prompting.

OUTPUT:-

Prompt Type	Number of Examples	Input	Output
ZERO-SHOT	0	“The movie was excellent.”	Positive
ONE-SHOT	1	“The service was very slow.”	Negative
FEW-SHOT	3	“The product quality is poor.”	Negative

Conclusion:

- Zero-shot: The model receives no examples and relies on its general understanding of the task.

- One-shot: The model receives one example, which provides a basic pattern to follow.
- Few-shot: The model receives multiple examples, giving the model more context about the expected classification pattern.
